

Our innovative Connect4Life program fuses “high-tech with high-touch” to offer a seamless, integrated healthcare experience.

Medical Concierges like Ashley are the communication hub connecting residents, families, doctors, and the Juniper team.

Juniper's Proven Model for Integrated Chronic Care Management

Respected third-party researchers found Juniper residents returned to the hospital 50% less often than people living at home or in another senior living community thanks to Connect4Life. **How is this possible?**

Juniper's Connect4Life program has three key components that make us different:

- 1 A Medical Concierge** who provides highly personalized service to each resident by managing communication with doctors, scheduling appointments, setting up transportation, and more.
- 2 Onsite services** like therapy, primary care, pharmacy, lab services and more – all under one roof at Juniper!
- 3 One Electronic Health Record** that pulls together information from all providers. This high-tech system makes sure Juniper has access to the full picture of a resident's medical history.

"After my mom had a stroke, I was overwhelmed trying to manage her care. Discovering Juniper and their Connect4Life program has been life-changing. Knowing they have it all under control has given us such peace of mind. Mom made a full recovery and hasn't had to return to the hospital, which is just incredible. Now, instead of being a caregiver, we can simply enjoy our time together. For that, I am eternally grateful to Ashley and the entire team."
